## HologramGlass™

We are proud to introduce our new exciting patented holographic HologramGlass™. These new laminated glass products exhibit reflective characteristics and effects through holography technology. The patented laminated inner layer provides a look never seen before in glass. When lit properly the holographic images not only pop with color but will also move as you move past the glass. Available in various thicknesses with mirror or colored backing. Various edge work options are available as well. HologramGlass™ can be used for interior or exterior applications. Holographic technology is the main feature of our laminated glass. However, light is the determining factor as to the behavior and characteristics of this truly exciting product. Light can either intensify or reduce the visual impact of this product. We offer 6 standard designs and the standard sheet sizes for Holographic Glass are 40" x 84" and 40" x 96". Crystal and Hyperplaid are available in extended widths of 55". All patterns are limited to 120" long.

### PRODUCT DESCRIPTION

**Composition** – HologramGlass™ decorative window glazing product is an approved safety glass exhibiting transmissive and reflective characteristics and effects through holography technology. It is constructed of two pieces of clear or tinted, annealed, float or tempered glass with a patented interlayer system between the layers of glass. The interlayer system consists mainly of poly vinyl butyl (PVB) or cold applied system with the holography applied within the interlayer system. Mirror may be substituted for one layer of glass for full reflection capabilities.

**Basic Uses** – HologramGlass™ can be used wherever standard glass is used. Since it is laminated it is a safety glass as well. HologramGlass™ is currently approved for interior as well as exterior applications such as glass curtain walls, partition glass, hand and guardrail systems, casework, furniture glass, tabletops, and shower doors. Because it is laminated it can be used in lieu of safety or tempered glass.

### FABRICATION

HologramGlass™ is fabricated using techniques commonly found for other laminated glass products such as water jet cutting, also the product edge polishes well with normal polishing systems. Holes of any common fastening size can be drilled for various mounting techniques. HologramGlass™ can be fabricated in thicknesses of 5/16", 3/8", 1/2", 3/4", 1", etc., for the desired strength, depending on application.

### MAINTENANCE

HologramGlass™ should be cleaned using a clean, soft cloth or sponge with normal glass cleaners.
